

Opening an Image (photo) that is on your Computer

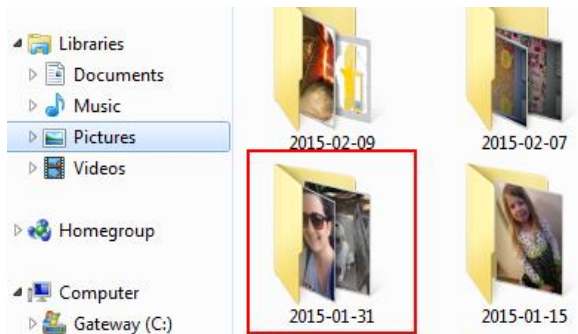

- Go to **Pattern Design Box** on your Workspace

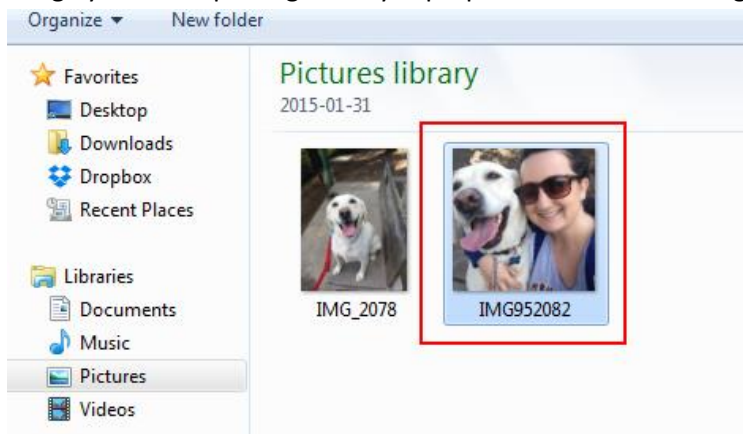

- Click on **Select/Create Image**
- To select an image (photo) from your computer-Click on **Select Image from Computer**

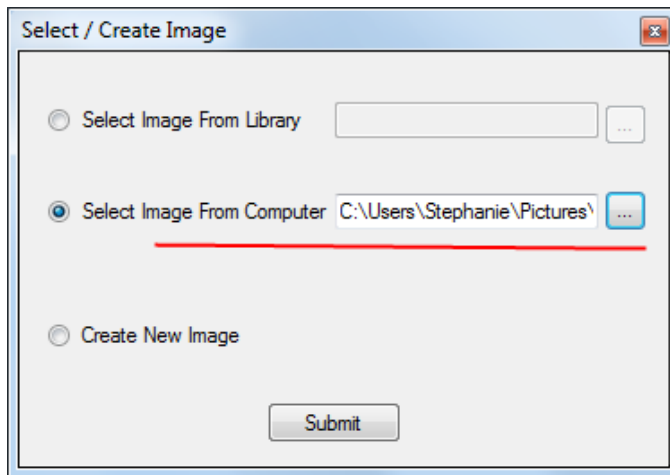

- Then Click on the **button** on the far right
- Your folders on your Computer will then appear

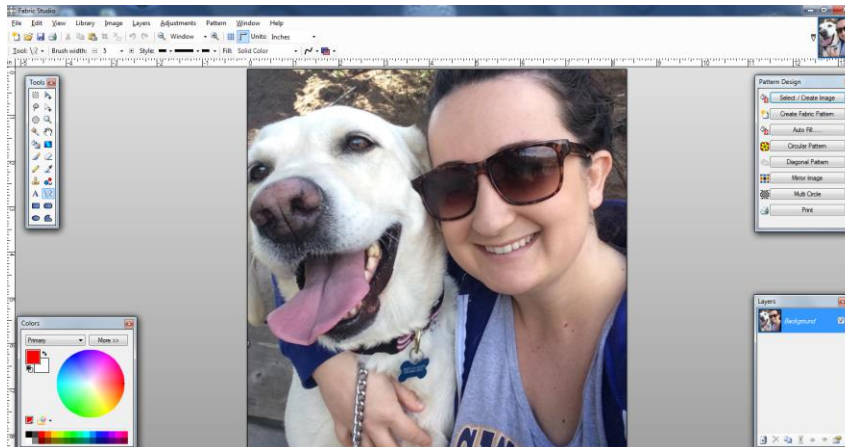

- Locate the image you want to import into the Fabric Studio Workspace. Everyone will have their own unique place for storing images on their computer. I have my photos stored under **Pictures** on my Laptop. Also, our files within the Fabric Studio are **.PNG Files** so when you go to view your images you might need to change the file type to either **Jpeg or Tiff** depending on type of image you are importing. On my Laptop it is on the bottom right.

- Once you have selected your image (photo) highlight it and then click on **Open**.
- Your **Select/Create Image Box** will reappear with your image attached

- Click on **Submit** and your image will now appear on your Fabric Studio Workspace

- Its now time to edit your Photo!

An alternate way to bringing images into Fabric Studio is as followed:

- **File/Open/go to where your images are stored on your computer/Select Image/click on Open.**
