

## How to Create Custom Size Patterns

Go to File/New  
Select Custom Size

Adjust Resolution First  
(All the images in our Libraries are 300 dpi, so if you are working with a smaller space, keep the resolution at 300. If you have a large format printer and you are filling a large area, you might want to adjust the resolution to 150. I would not go below 150, because the quality will go down.)

Select Width & Height  
Click "OK"

I have selected to minimize my workspace to 50% so I can see my project easier to work with.

You can now use Auto Fill to begin working on your custom size pattern.
