

Creating a .png File

There are several ways to create a .png file:

You can export a .png file from Adobe Illustrator.

You can import a .jpeg image from your computer, and turn it into a .png file.

Or you can create a .png file inside the Fabric Studio™.

Follow the following steps to create your .png file:

Go to Create/Select Image

Click on New Image

First add a new layer to your Layer Box

Copy and paste your .jpeg image on layer 2

If you are creating a name, create it on layer 2. Once your name is complete, you might want to use your Rectangle Select Tool and make your image smaller. Select the area with the Rectangle Tool, then use the Crop Tool to crop the image.

Once you are finished, delete the background layer

You will now notice the pixels are present in the background. Save the new image to your computer folder as a .png file.

Now when you select your image, you will be able to layer, rotate, enlarge your image.
