

FABRIC PROTECTORS

For added protection for items such as purses that will be subjected to a lot of wear, apply a fabric protector.

Don't apply the fabric protector too heavily, or your fabric will become somewhat stiff.

Some fabric protectors, such as Scotchgard™, are applied by spraying. For your safety, carefully follow the directions on the can.

Other fabric protectors are applied by dipping your fabric in a container filled with a mixture of the fabric protector and water. To prevent the hand of your fabric from changing too much, dilute the fabric protector solution with additional water.

Fabric protectors can be reapplied as needed.
